Task 011: The system must show money amounts as they are entered by the users	
Descripción:	The system must show money amounts as they are entered by the users, but also their corresponding money exchanges according to the system currency if their known exchange ratios are recent. It is the students' responsibility to find the appropriate exchange-rate service; no implicit or explicit liabilities shall be covered by the University of Seville or their individual affiliates if the students hire pay-per-use services! This requirement must be fulfilled in this and every subsequent group or individual deliverable for it to be considered fulfilled

Task 012: The system must prevent the principals from storing any data that can be considered spam	
Descripción:	The system must prevent the principals from storing any data that can be considered spam. A piece of text is considered spam if the number of spam terms exceeds a predefined spam thresh-old. The default list of spam terms includes the following ones: "sex", "viagra", "cialis", "one mil-lion", "you've won", "nigeria", and their corresponding translations into the languages considered for internationalisation; the default spam threshold is 10%. Note that the previous default values can be changed at will by the administrators. Realise that a term must be considered spam irre-spective of its case and the blanks in between its words; for instance, "one_million" is a spam term that matches "one_million", "ONE_MILLION", "OnE_MiLLiOn", or "One_ Million"; it doesn't match "One_Millionaire", "One_or_two_millions", or "One_sex_million", though. The spam detector must be reusable across different projects; that is: it must be implemented as an independent project that must be packaged into a reusable de-pendency. Do not forget to deliver your spam detector project so that it can also be evaluated or, otherwise, this requirement shall not be considered fulfilled. This requirement must be fulfilled in this and every subsequent group or individual deliverable
